

ACCESSORIES TISCHPLATTE

Solid wood such as teak and eucalyptus is the only true material for outdoor furniture in the eyes of wood fans. Teak is hard-wearing, can remain outdoors all year round and develops a noble silver-grey patina when untreated. To preserve the yellow-brown colour and ease of care, the table tops in frame and moulding look should be oiled with the appropriate products before first use. To refresh and protect the colour tone, we recommend regular repetition of the oil treatment. Environmentally conscious natural wood lovers will also find table tops in a stable frame and moulding look made of eucalyptus wood, which comes from sustainable forestry. Eucalyptus is considered to be particularly hard and, with regular care, is ideally suited for outdoor use. For maintenance care, we offer special oils that preserve the surface properties and colour tone.
